Mixed Method analysis design and reporting

Digital Methods

Julie Hvidsteen

27th of May 2025

UNIVERSITY OF COPENHAGEN

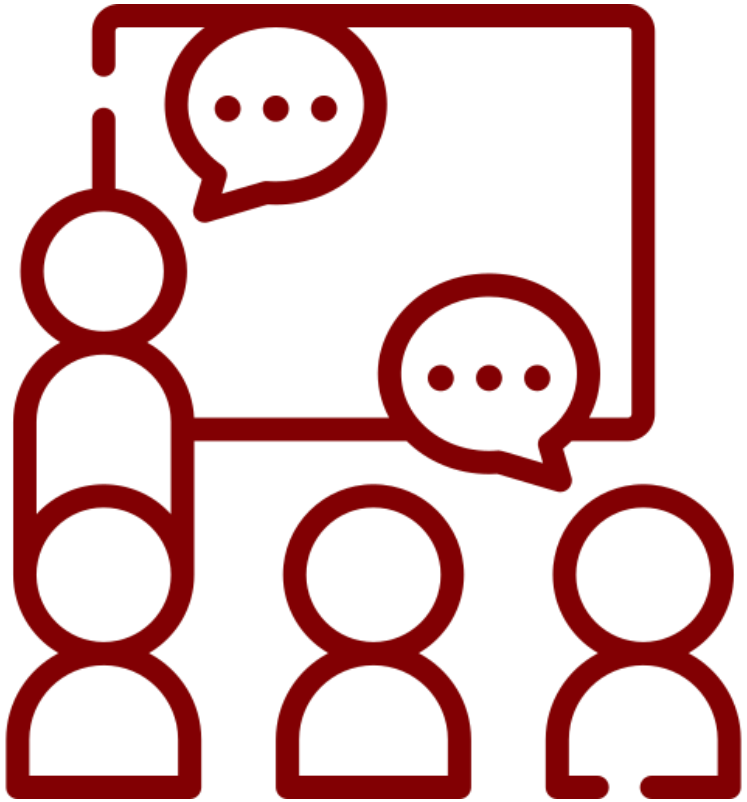
Milestone 4 - Presentation

Milestone 4 – Friday, *30th of May* - 30 min per group depending on the number of groups and size of groups.

A slideshow with 7 slides:

1) Research question and motivation
2) Description of datasite and topic
3) Data design
4) 3 slides for analysis and results(BOTH qual and quant)
5) Conclusion

15 min presentation per group and 15min plenum discussion with peer and TA feedback.



Presentation plan

Room: CSS 1-1-17

Agenda

10:15–10:30 → Introduction to the program

10:30–11:00 → Prepping

11:00–11:15 → Break

11:15–11:45 → Webslouth

11:45–12:15 → Parasocial Relationships

12:15–12:30 → Break

12:30–13:00 → Styles of humor in YouTube comedy and reactions

Intended learning outcomes

Knowledge

- Show familiarity with the basic techniques, use scenarios, and validity criteria of computer-assisted qualitative methods, i.e. digital ethnography, content analysis, and exploratory network analysis.
- Account for the procedures, potentials, and pitfalls of combining qualitative and quantitative data sources, including in integrated quali-quantitative ways.
- Account for the relationship between digital methods' emphasis on the media contexts of digital data and the broader questions, claims and biases of social data science.

Intended learning outcomes

Skills

- Identify the procedures of qualitative content analysis for designing appropriate semantic categories, including for use in subsequent machine learning with quantitative text (and/or visual) data.
- Extract, and communicate patterns of networks, ideas, and behaviour characteristic of specific social settings and public issues, using the appropriate qualitative method(s).
- Combine qualitative data with a quantitative data source, thereby integrating heterogeneous digital data formats into comprehensive social analyses.

Intended learning outcomes

Competencies

- Evaluate and analyse a social data problem from both qualitative and quantitative perspectives, including determining when to deploy which method designs.
- Design and implement small-scale digital ethnography campaigns, along with exploratory network analysis and content analysis, to obtain insights into social networks, ideas, and behaviour at individual and organizational levels.
- Combine qualitative and quantitative sources of data, as well as forms of narration and visualization, into persuasive quali-quantitative reports on social data problems for a range of organizational use scenarios.
