Computer assisted discovery and open coding

Mihaela Capriean
6th of May, 2025

UNIVERSITY OF COPENHAGEN

Any questions from the lecture?

Milestone 2 general feedback

- Ensure you define your **concepts** and **operationalizations** more clearly.
- Consider whether your research is **informed by theory**, or rather **grounded,** and also justify your **design choices** – if you have hypotheses/confirmatory approaches, keep in mind statistical significance and potential power analyses
- Justify your **data sources** and **sampling procedures** in more depth – not enough to say that you will collect X data:
  - Why is this data specifically suitable to answer your RQ?
  - What data types will you be collecting?
  - How will these inform your operationalization?
- Make sure you keep track of your progress and netnography in your **immersion journal** – you can use it for open coding too.

Agenda

1. Project updates

- One slide updates

2. Open coding

- Sit in your project groups and perform open coding on a sample of your data, for an hour – imagine you are the scientific advisory board to a project, and you are focusing on **analytically relevant themes**, based on your theoretical elements and netnography/domain knowledge.

3. Strategy for open coding

- Start developing your strategy for computer-assisted open coding – includes **design**, preparing the **data**, writing the actual code, etc.

Tak for i dag!

Next time: Supervision

Seminar on Thursday: Working on exploratory data analysis

- No readings.
